Blue FluoroNanoQ

Product Description

Blue FluoroNanoQ is magnetic bead with blue fluorescent dye. The magnetic bead consists of single-crystal Fe_3O_4 magnetic sphere core and being coated with dextran dispersed in phosphate buffered saline (PBS) solution. The beads with blue fluorescent dye spectrally similar to the traditional blue fluorescent dye, AMCA. The Blue FluoroNanoQ can be introduced into cells by microinjection, it can use to microscopy, flow cytometry, and magnetic resonance imaging (MRI). This product is highly hydrophilic, bio-compatible, and easy to use for cellular imaging research.
